

$$9(iii) \quad -\frac{3}{4}, \frac{2}{-3}$$

$$= -\frac{3}{4}, -\frac{2}{3}$$

$$= \frac{-9}{12}, \frac{-8}{12}$$

$$\frac{2}{-3} > -\frac{3}{4} \quad (\because -8 > -9)$$

$$9(iv) \quad \frac{1}{4} > -\frac{1}{4} \quad (\because +ve \text{ no.} > -ve \text{ no.})$$

$$9(v) \quad -3\frac{2}{7}, -3\frac{4}{5}$$

$$= -\frac{23}{7}, -\frac{19}{5}$$

$$= \frac{-115}{35}, \frac{-133}{35}$$

$$-3\frac{2}{7} > -3\frac{4}{5} \quad [\because -115 > -133]$$

$$10(i) \quad -\frac{3}{5}, -\frac{2}{5}, -\frac{1}{5}$$

$$-\frac{3}{5} < -\frac{2}{5} < -\frac{1}{5} \quad [\because -3 < -2 < -1]$$
